Profile

I am an Innovative frontend web developer with expertise in Javascript, React, Next Js, Vite, Firebase, and Tailwind CSS. Skilled in building interactive web applications, integrating real-time database features in any application. Experienced in creating seamless user experiences with dynamic animations and efficient database management. Dedicated to delivering scalable and user-friendly solutions.

Professional Experience

Freelance, *Frontend Development*   2020 | Amsterdam, Netherland
Developed task management features, including CRUD operations and custom alerts, using React and Firebase.
Designed user interfaces with Tailwind CSS, maintaining consistency across components and ensuring an intuitive user experience.
Created and managed leaderboards displaying real-time user rankings and dynamically fetching data from Firestore.
Maintained existing design layouts while integrating new functionalities based on client requirements

Mounttech Solution, *Frontend Development*   CALABAR, Nigeria
Designed and developed interactive web applications using React and Vite, ensuring high performance and responsiveness.
Implemented advanced Firebase Firestore functionalities for real-time data updates, user authentication, and database operations. Implemented advanced Firebase Firestore functionalities for real-time data updates, user authentication, and database operations.
Developed a dynamic referral system that rewards users with points, tracked through Firebase, and seamlessly integrated into the application UI.

Languages

English Language

Skills

Building single-page applications (SPAs) using modern frameworks

Developing responsive and interactive user interfaces

Implementing real-time database interactions

Designing custom animations and visual effects for web applications

Debugging and troubleshooting frontend and backend application errors

Optimizing application performance and responsiveness

Integrating third-party APIs

Balancing new features with existing UI design for consistency

Debugging and optimizing JavaScript and React applications

Projects

Expense Tracking Application ⬀
An intuitive expense tracking application built with React, styled using CSS Modules, and integrated with Firebase for data management. Categorize expenses (e.g., food, transport, etc.), view monthly summaries and total expenses and user authentication and data syncing via Firebase.

Telegram Mini Application ⬀
SA lightweight Telegram-inspired mini application built with React, styled using Tailwind CSS, and integrated with Firebase for real-time update

Decentralised Web 3 Applicaion ⬀
A decentralized Web3 application built with Next.js, styled with CSS, and powered by Solidity for blockchain functionality. Smart contracts for secure and transparent transactions, Decentralized data storage and interaction with the blockchain, User-friendly interface with seamless wallet integration (e.g., MetaMask) and Real-time updates on blockchain data.

Food Recipe Application ⬀
This **Food Recipe Application** is an intuitive platform designed to help users discover, organize, and share culinary recipes. The application caters to food enthusiasts by providing features such as searching for recipes and creating personalized recipe collections
